

C++ Software Engineer | Game Development

C++ software engineer with 4+ years of professional experience in game development. Experienced in developing and integrating gameplay systems, UI, multiplayer features, and new functionality into large production codebases.

WORK EXPERIENCE

PLAYRIX - C++ Game Developer

October 2025 – September 2026

- Developed and shipped gameplay features in C++ for Township using Playrix's proprietary game engine.
- Owned features through the full development lifecycle: technical design, implementation, integration, release, and post-launch support.
- Implemented gameplay logic, UI, social mechanics, payment flows, configuration systems, and product analytics, integrating new functionality into a large legacy codebase.
- Collaborated with game designers, UI developers, and VFX artists, proposing technical solutions and designing reusable implementations for new mechanics.
- Shipped 5 production features within one year, including features extending the game's core city-building mechanics.
- Performed code reviews, production bug fixes, and supported junior developers.

JSA-GROUP - Middle Unity/Unreal Engine Developer

September 2023 – October 2025

- Developed single-player and multiplayer VR training simulators using **Unity, Unreal Engine 5, C#, and C++**.
- Developed gameplay systems, UI, and multiplayer functionality in a large existing production codebase.
- Integrated and optimized VR Interaction Framework systems and improved application performance for VR hardware.
- Worked on computer vision and data science tasks in Python, including model training and data processing.

SERVICE INFORMATION PARTNERSHIP COMPANY - Unity Developer

July 2022 - August 2023

- Developed single-player and multiplayer VR training simulators using Unity and C#.
- Implemented Photon-based multiplayer systems, including player interaction and action synchronization.
- Developed gameplay and UI functionality within an existing production codebase.

UNIVERSITY OF WISCONSIN - STOUT

Unity Programmer Intern

May 2021 - August 2021

- Developed and published a Unity 3D application for displaying cultural heritage objects for the Minneapolis Institute of Art.
- Implemented lighting, object visualization, selection UI, and exhibition-specific functionality.

EDUCATION

UNIVERSITY OF WISCONSIN - STOUT - B.S. COMPUTER SCIENCE

Concentration in Game Design and Development, Minor in Mathematics

May 2022

TECHNICAL SKILLS

Languages: C++, C#, Python
Game Engines: Unity, Unreal Engine 4/5
Tools: Git, SVN, TeamCity, Cursor, Claude Code
